GM 1994-Current Power Flow Mass Airflow Sensor Housings Installation Instructions (Read Carefully Before Starting Project)

Introduction:

This product offers inexpensive replacement mass airflow sensor housing to improve the performance potential of 1994-current General Motors vehicles. With the gain in horsepower from performance camshafts, high flow cylinder heads and tuned exhaust systems, production mass airflow sensors become too restrictive. This led to the design of Power-Flow housings. These housings are sure to enhance the effectiveness of other performance equipment already installed or of future installations.

Installation Steps:

1. Disconnect Battery (negative side first).
2. Using a flat blade screwdriver or an 8mm (5/16) socket, loosen the hose clamps that attached the existing mass air sensor to the air inlet tube and throttle body. Remove the air inlet tube from the mass air sensor by grasping the sensor in one hand and the tube in the other. Using a twist pull motion, separate the two parts.

NOTE: DO NOT USE A SCREWDRIVER TO PRY THE HOSE OFF THE MASS AIR SENSOR. DAMAGE TO THE STOCK SENSOR OR PERSONAL INJURY MAY RESULT.

3. Disconnect the wiring harness connector to the mass air sensor. This can be done easily by grasping the connector and pulling while holding the bottom tab away from the connector.

NOTE: THE CONNECTOR MAY STICK TO THE SENSOR CONNECTIONS. IF THIS OCCURS, CAREFULLY PRY AWAY THE CONNECTION WITH A SMALL FLAT BLADE SCREWDRIVER.

4. Remove the four screws that sandwich the factory aluminum housing to the main body itself.
5. Once separated, remove thin o-rings from existing housing and install on new Power-flow housings.
6. Re-assemble sensor in reverse of step 4.
7. Reverse steps 1 through 3 for installation of new Mass Airflow Sensor

NOTE: THIS IS NOT A CALIBRATED SENSOR ANYMORE. WHILE IT WILL INCREASE AIRFLOW, UN-CALIBRATED SENSORS CANNOT BE EXPECTED TO PERFORM AT THE SAME LEVEL AS AFTERMARKET CALIBRATED UNITS. THEREFORE THESE HOUSING ARE NOT 50-STATE LEGAL.
